

FROM THE AI EDGE COHORT

THE PROMPT PLAYBOOK.

The framework behind sharp AI answers, *plus 30 prompts you can steal today.*

INSIDE

- A** Email & Communication
- C** Data & Analysis
- E** Presentations

- B** Reports & Documents
- D** Meetings
- F** The Thinking Partner

R

Role

C

Context

T

Task

F

Format

Before you read a single prompt.

Two professionals open ChatGPT at 9am.

The first types "write me a report" and gets something generic. He edits for an hour, mutters that AI is overhyped, and goes back to doing everything manually.

The second types four sentences. She gets a draft so close to final that she polishes it in six minutes and moves to the next thing.

Same tool. Same morning. Same price: free. The difference is not talent. It is a framework you can learn in one read and master in one week.

The Framework: R • C • T • F

Every weak AI answer is missing one of four ingredients. Every strong one has all four.

R – Role

Tell the AI who to be. "You are a senior financial analyst" produces a different mind than a blank chat. AI performs the character you assign it.

C – Context

Tell it your situation: industry, audience, constraints, what has already happened. Context turns advice for anyone into advice for you.

T – Task

Say exactly what you want done. One task per prompt. Three tasks pretending to be one prompt is why answers wander.

F – Format

Say what the output should look like: a table, five bullets, a 150-word email. If you do not choose the format, the AI chooses wrong.

THE FORMULA

"You are [ROLE]. [CONTEXT: my situation, audience, constraints]. [TASK: the one thing I want]. Give it to me as [FORMAT]."

1 · Iterate, don't surrender

The first answer is a first draft. Reply with "sharper", "shorter", "now from the customer's view". Each reply compounds.

2 · Feed it your material

Paste the actual thread, the actual data, the actual brief. AI with your material is a colleague. Without it, a stranger guessing.

3 · Verify what matters

AI drafts. You decide. Numbers, names, claims and quotes get checked before they leave your desk.

PART A

Email & Communication.

The fastest wins live here. These five cover ninety percent of your inbox.

1 The reply that writes itself

You are my executive communications assistant. I received the email below. I want to [agree / decline / push back / ask for time]. My relationship with the sender is [formal / friendly / delicate]. Draft a reply under 120 words that is warm but direct. Paste: [email]

2 The difficult message

You are an expert in workplace communication. I need to tell [person/team] that [difficult news] without damaging the relationship. Context: [background]. Draft three versions: direct, diplomatic, and brief. I will choose the tone.

3 The follow-up that gets answered

Draft a follow-up to the message below. It has been [X days] with no reply. Tone: polite, confident, zero desperation. End with one specific question that is easy to answer. Paste: [original message]

4 The announcement

You are a corporate communications lead. Draft an announcement to [audience] about [change/news]. They will care most about [impact on them]. Format: subject line, two short paragraphs, one clear next step.

5 The translation

Rewrite the message below so a [non-technical executive / new junior staff / external client] fully understands it. Keep every fact. Cut every piece of jargon. Paste: [message]

PART B

Reports & Documents.

The blank page is where hours die. These five kill it.

6 The blank-page killer

You are a [your role] at a [industry] company. Draft the skeleton of a [report type] on [topic] for [audience]. Give me the section headings and two bullet points of what belongs under each. I will fill in the substance.

7 The executive summary

Summarise the document below into an executive summary a busy director reads in 60 seconds. Format: one sentence of context, three key findings as bullets, one recommended action. Paste: [document]

8 The proposal

You are a business development consultant. Draft a one-page proposal for [client] to [what you are offering]. Their pain point is [problem]. Structure: the problem in their words, the solution, three deliverables, timeline, next step.

9 The polish pass

Edit the draft below like a demanding editor. Tighten every sentence, kill repetition, keep my voice, and flag anything unclear in [square brackets]. Paste: [draft]

10 The version for the boss

Rewrite the update below for my [MD / CEO / board]. They want outcomes, risks, and asks, not process. Maximum 150 words. Paste: [update]

PART C

Data & Analysis.

For the professionals who live in spreadsheets. Numbers into narrative, minus the hours.

11 The spreadsheet whisperer

You are a data analyst. Here is my data. First, tell me the three most important patterns you see. Second, tell me what a smart manager would ask next. Do not calculate anything without showing your steps. Paste: [\[data\]](#)

12 Numbers into narrative

Turn the figures below into a short narrative for a management meeting: what happened, why it likely happened, and what we should watch next month. Plain language. No table dumps. Paste: [\[figures\]](#)

13 The variance detective

Here are this month's numbers against budget/last month. Identify the three biggest variances, give one plausible explanation for each, and suggest one question I should ask my team per variance. Paste: [\[numbers\]](#)

14 The chart chooser

I need to present [\[data/point\]](#) to [\[audience\]](#). Recommend the single best chart type, what goes on each axis, and the one-sentence title that states the takeaway rather than describing the data.

15 The sanity check

Act as a sceptical auditor. Review my analysis below and try to break it: wrong assumptions, missing factors, misleading comparisons. List every weakness you find, ranked by severity. Paste: [\[analysis\]](#)

PART D

Meetings.

Before, during, after. The whole meeting lifecycle, handled.

16 The agenda architect

Design a [30/60]-minute agenda for a meeting about [topic]. Attendees: [who]. The decision we must leave with: [decision]. Format: timed segments, each with an owner and an output.

17 The minutes machine

Turn my rough notes below into clean minutes: decisions made, actions with owners and deadlines, and open questions. Format as three lists. Paste: [notes]

18 The pre-read

Draft a one-page pre-read for [meeting] so attendees arrive informed. Context: [background]. It must answer: why are we meeting, what do we know, what are we deciding. Paste any material: [material]

19 The tough-room rehearsal

I am presenting [proposal] to [audience] tomorrow. Play the most difficult person in that room. Ask me the five hardest questions they could ask, one at a time, and critique my answers.

20 The follow-through

Based on the minutes below, draft the follow-up message to all attendees: thank them, restate decisions in one line each, list actions with owners and dates. Under 150 words. Paste: [minutes]

PART E

Presentations.

For the rooms where careers are made. Decks that argue, not decorate.

21 The deck skeleton

You are a presentation strategist. I am presenting [topic] to [audience] for [X minutes]. My single message is [message]. Design the slide-by-slide outline: title of each slide as the point it proves, plus one line on its content.

22 The story spine

Take my rough content below and restructure it as a story: the situation, the tension, the resolution, the ask. Tell me which content belongs where and what is missing. Paste: [content]

23 Slide notes that sound like me

Write speaker notes for the slide below. Conversational, confident, 60 seconds of speaking time, no reading the slide aloud. Paste: [slide content]

24 The one-slide version

Leadership cancelled my 20 minutes. Compress the deck below into ONE slide: headline that states the conclusion, three supporting points, one ask. Paste: [deck outline]

25 The data slide fixer

Here is a slide full of numbers. Redesign it: what stays, what moves to an appendix, and the takeaway title that tells the audience what the numbers mean. Paste: [slide content]

PART F

The Thinking Partner.

Where most professionals never go. It is also where the real edge lives.

26 The decision stress-test

I am about to decide: [decision]. My reasoning: [reasoning]. Act as a rigorous thinking partner. Steelman the opposite choice, list what I might be missing, and tell me what evidence would change my mind. Do not be agreeable.

27 The blind-spot finder

Here is my plan: [plan]. List the five assumptions it silently depends on. For each, tell me how I would know early if the assumption is failing.

28 The perspective machine

Analyse [situation] from three seats: my CEO, my customer, and my most critical competitor. One short paragraph each. What does each of them see that I do not?

29 The pre-mortem

It is twelve months from now and [project] has failed badly. Write the honest post-mortem: the three most likely causes, the warning signs we ignored, and what we should have done in month one.

30 The clarity engine

I will describe a messy situation. Ask me one question at a time, up to seven questions, until you can state my real problem in one sentence. Then state it, and propose the first move. Here is the mess: [describe]

A playbook informs. *A cohort transforms.*

Read these 30 prompts and you will be sharper this week. That is real, and it is yours to keep.

But a playbook cannot watch you work. It cannot catch the habit slowing you down, sit you in a hot seat with your actual tasks, or hold you accountable for six weeks until the skill is permanent.

That is what **The AI Edge** is. Six live sessions. Four to build the skill, two to prove it on your real work. You ship one real AI workflow for your job, and you keep the toolkit, the community, and the certificate.

THE AI EDGE COHORT

First 15 seats: **₦50,000** · then **₦75,000**

Not sharper after your first two sessions? You pay nothing. That is the guarantee.
